

CRANE TEC, INC.

***Continuing to Meet the
Unique Needs of Our Clients***

Finished product - 1 ton building supported system

The Challenge:

To provide our customer, a specialties control manufacturer, with two one ton crane systems in their existing metal building. Our customer requested that the crane system be operable in four weeks.

Special Consideration:

Crane-Tec armed with engineers and over 30 years experience new that the building frame had to be checked to determine additional load carrying capabilities. Customer application had to be considered because of their large floor coverage needs.

Our TEAM Approach:

Crane-Tec contacted the metal building supplier and together we analyzed the building and determined that with slight modifications the building would support two one ton crane systems.

Results:

Our customer received two building supported fully motorized cranes at the same price as freestanding systems with greatly reduced coverage areas. Crane-Tec supplied a turn key crane system in 3 weeks enabling the customer to start production ahead of schedule.
