

CRANE TEC, INC.

Continuing to Meet the Unique Needs of Our Clients

The Challenge:

To provide the customer with a building supported crane system with four (5) ton top running single girder cranes. Crane-Tec helped design the material handling system to meet the needs of our customer's new and innovative foundation wall manufacturing plant.

Special Consideration:

The product was to be manufactured in the horizontal plain, but shipped on the vertical. The long foundation walls need to be handled with precision equipment.

Our TEAM Approach:

Crane-Tec worked with the customer to evaluate the lift necessary to transfer the walls from horizontal to vertical then to load for delivery. A number of options were developed to enhance production and address safety concerns:

- Radio controls enable safe distance during load operation.
- Variable Speed bridge and trolley for smooth movement of product.

Crane-Tec cranes in use after completion.

Result:

Crane-Tec supplied the customer with cutting edge equipment, providing safe and cost-efficient means for handling the walls. The material handling systems are working safely and efficiently, and the customer is completely satisfied.
